THALIA 5a - pure white, clusters	.25	ZIRCON 2b - white, light yellow	.70

All prices above are for single bulbs

SEEDLINGS, BETTER MIXTURE	\$3.00 per dozen
SEEDLINGS, RED CUP MIXTURE	3.00 per dozen
SEEDLINGS, PINK MIXTURE	3.00 per dozen
SEEDLINGS, LEMON MIXTURE	5.00 per dozen

Not every bulb in the separate color mixtures can be expected to come true to color as much depends on temperature, humidity, and soil moisture before and during flowering time, and there are a few rogues in most of the lots as grown. The lemon mixture will be largely made up at the time of filling orders, and virtually all bulbs in dozen lots will be different; however, if more than one dozen are ordered, duplicates can be expected.

See catalogs for descriptions, but please do not order varieties listed in the catalog but not listed here as most of those are not available.

DISCOUNTS ON EARLY ORDERS

As in previous years, on orders of \$10.00 or more accompanied by cash and mailed by May 1st, a discount of 10% may be taken. Do not include varieties marked "net" in computing discount. Prices are for double nose bulbs except for a few of the smaller Daffodils that usually make relatively few good double nose bulbs. Shipments of bulbs begins around September 1st.

Our 1963 catalogs should be ready in June.

GRANT E. MITSCH
"Daffodil Haven"
CANBY, OREGON

1. The first part of the report is a general description of the area. It is a small, irregularly shaped area, about 100 feet long and 50 feet wide. It is located in the center of the field, and is surrounded by a low wall. The area is covered with a thick layer of grass, and there are some small trees and shrubs growing around it.

2. The second part of the report is a description of the vegetation. The area is covered with a thick layer of grass, and there are some small trees and shrubs growing around it. The vegetation is typical of the area, and is well adapted to the soil and climate.

3. The third part of the report is a description of the soil. The soil is a light brown, sandy loam, and is well adapted to the vegetation. It is a typical soil for the area, and is well adapted to the climate.
